

## BENEFITS OF ENLIGHTCO'S ILLUMINATION

- Works better than any other light in extreme cold or hot temperatures (-60 celsius to +80 celsius)
- Needs no backlighting or complicated wiring and setups - installation is easy - plug and light
- It is scratch and acid proof
- Can be seen from longer distances than any other light solutions
- Pleasing to the human eye
- It is Ultra thin (less than half of 1mm)
- Does not heat up and is the greenest light in the market

# ILLUMINATED METALS

# UNLIMITED DESIGN CAPABILITIES

“BRING YOUR METAL TO LIFE WITH ENLIGHTCO”

## HOW DOES IT WORK?

With Enlightco's illumination technology it is possible to bring metals to life by lighting them up. Now metals can become even more functional by illuminating in times when extra visibility is needed or for design and aesthetic reasons. Metal compartments, sheets and pieces can now also have illuminated advertisements on them without the need for backlighting and any complicated alterations that is normally needed with

other lighting options in the market. With Enlightco metals can now change colour or even become “intelligent” with the use of sound, motion or light sensors. The possibilities for functionality, design and aesthetics are endless!
