ILLUMINATED GLASS

UNLIMITED DESIGN CAPABILITIES

HOW DOES IT WORK?

With Enlightco's illumination technology it is now possible to bring glass areas and features to life. This can be done by illuminating patterns on glass or entire areas in order to give the glass a function. For example, meeting rooms could have illuminated features to help increase the productivity of the meeting taking place, or just to let the participants know when

the meeting is nearly finished. Enlightco's illumination can also be used to improve aesthetics in office and living spaces by bringing patterns on glass to life, or even corporate logos. Text and announcements can also be illuminated (useful in shop windows or in spaces that require more visible announcements). From the flick of a switch a glass part or entire area's look and feel can be transformed into a different colour and decoration.
